

JAYPEE UNIVERSITY OF INFORMATION TECHNOLOGY, WAKNAGHAT

Make-up Examination-Nov-2025

COURSE CODE (CREDITS): 25B11MA313(4)

MAX. MARKS: 25

COURSE NAME: : PROBABILITY AND STATISTICAL TECHNIQUES

COURSE INSTRUCTORS: MDS

MAX. TIME: 1 Hour 30 Minutes

Note: Note: (a) All questions are compulsory.

(b) The candidate is allowed to make Suitable numeric assumptions wherever required for solving problems.

(c) Scientific calculator is allowed.

Q.No	Question	CO	Marks														
Q1	<p>For the following data:</p> <table><tr><td>Class</td><td>0 - 10</td><td>10 - 20</td><td>20 - 30</td><td>30 - 40</td><td>40- 50</td><td>50 - 60</td></tr><tr><td>Frequency</td><td>5</td><td>15</td><td>25</td><td>35</td><td>45</td><td>55</td></tr></table> <p>Calculate (a) Mean (b) Variance.</p>	Class	0 - 10	10 - 20	20 - 30	30 - 40	40- 50	50 - 60	Frequency	5	15	25	35	45	55	CO-1	6
Class	0 - 10	10 - 20	20 - 30	30 - 40	40- 50	50 - 60											
Frequency	5	15	25	35	45	55											
Q2	Urn <i>A</i> contains 2 white and 5 black balls and urn <i>B</i> contains 3 white and 6 black balls. A balls is taken out at random from urn <i>A</i> and transferred to urn <i>B</i> . Then a ball is drawn at random from urn <i>B</i> . What is the probability that it is a black ball ?	CO-2	3														
Q3	It is estimated that 50% of emails are spam emails. Some software has been applied to filter these spam emails before they reach your inbox. A certain brand of software claims that it can detect 99% of spam emails, and the probability for a false positive (a non-spam email detected as spam) is 5%. Now if an email is detected as spam, then what is the probability that it is in fact a non-spam email ?	CO-2	4														
Q4	The probability of the occurrence of an event <i>A</i> is 0.7, the probability of the non-occurrence of an event <i>B</i> is 0.5, and that of at least one of <i>A</i> and <i>B</i> not occurring is 0.6. Find the probability that at least one of <i>A</i> and <i>B</i> occurs?	CO-2	4														
Q5	<p>A discrete random variable <i>X</i> has the following distribution:</p> <table><tr><td>X</td><td>0</td><td>1</td><td>2</td><td>3</td></tr><tr><td>P(X)</td><td>0.1</td><td>0.3</td><td>0.4</td><td>0.2</td></tr></table> <p>Find: (a) <i>E</i>(<i>X</i>) (b) <i>Var</i> (<i>X</i>) (c) <i>P</i>(<i>X</i> ≥ 2)</p>	X	0	1	2	3	P(X)	0.1	0.3	0.4	0.2	CO-2	4				
X	0	1	2	3													
P(X)	0.1	0.3	0.4	0.2													
Q6	<p>Let <i>X</i> be a random variable with PDF given by</p> $f(x) = \begin{cases} kx^2, & \text{if } -1 \leq x \leq 1 \\ 0, & \text{otherwise} \end{cases}$ <p>Find (a) the constant <i>k</i> (b) <i>E</i>(<i>X</i>) (c) <i>Var</i>(<i>X</i>) (d) <i>P</i>((<i>X</i> ≥ 1/2).</p>	CO-2	4
