

JAYPEE UNIVERSITY OF INFORMATION TECHNOLOGY, WAKNAGHAT

TEST -1 EXAMINATION- Sept. 2017

M.Tech. III Semester

COURSE CODE: 15M3WCE311

MAX. MARKS: 15

COURSE NAME: Environmental Geotechnics

COURSE CREDITS: 3

MAX. TIME: One Hr

Note: All questions are compulsory. Carrying of mobile phone during examinations will be treated as case of unfair means.

- [1] At a landfill site, leachate accumulated over a 0.3m thick clay liner contains chloride concentration of 1000 mg/L having free – solution diffusion coefficient of 20.3×10^{-10} m²/s. If the tortuosity is equal to 0.5, what would be the concentration of chloride at a depth of 3m after 100 years of diffusion? Neglect the effect of advection. Refer Table1.

[6]

- [2] Estimate the time travel for the following contaminants from the source area to a water well located 100 m away in an aquifer with bulk density of soil = 1.5 g/cm³, n = 40%, organic carbon = 1%:

- (i) Chloride ion (non-absorbing)
- (ii) Ethylene

The water solubility of Ethylene is given as 131 mg/L. The ground water velocity is 10 m/yr.

[2+3=5]

- [3] Derive the equation for transient state flow in saturated soil condition.

[4]

CE-22, MT
