Notices

Knowledge and best practice in this field are constantly changing. As new research and experience broaden our understanding, changes in research methods, professional practices, or medical treatment may become necessary.

Practitioners and researchers must always rely on their own experience and knowledge in evaluating and using any information, methods, compounds, or experiments described herein. In using such information or methods they should be mindful of their own safety and the safety of others, including parties for whom they have a professional responsibility.

To the fullest extent of the law, neither the Publisher nor the authors, contributors, or editors, assume any liability for any injury and/or damage to persons or property as a matter of products liability, negligence or otherwise, or from any use or operation of any methods, products, instructions, or ideas contained in the material herein.

Part I
Basic principles 1

1. Nanosensors for smart cities: an introduction 3

Atefeh Nazari

1.1 Introduction 3
1.2 Definition and classification of nanosensors 3
1.3 Nanosensors for smart cities 5
References 6

2. Methods for design and fabrication of nanosensors: the case of ZnO-based nanosensor 9

Luiz Fernando Gorup, Luís Henrique Amorin, Emerson Rodrigues Camargo, Thiago Sequinel, Fernando Henrique Cincotto, Glenda Biasotto, Naomi Ramesar and Felipe de Almeida La Porta

2.1 Introduction 9
2.1.1 Electrochemical sensors 9
2.2 ZnO, a versatile semiconductor material 10
2.2.1 Nanostructured ZnO thin film prepared by microwave-assisted and conventional hydrothermal approaches 10
2.2.2 Sputter deposition of ZnO layers for nanosensors applications 13
2.2.3 Electrodeposition 19
2.2.4 Conductive polymers sensor 19
2.2.5 Electropolymerization 20
2.2.6 Spray pyrolysis 21
2.2.7 Pulsed laser deposition method 22
2.3 Challenges and prospects 24
References 24

3. Methods for design and fabrication of nanosensors and their electrochemical applications on pharmaceutical compounds 31

Hamideh Imanzadeh, Nurgul K. Bakirhan, Ali Sınag and Sibel A. Ozkan

Abbreviations 31
3.1 Introduction 33
3.1.1 Sensor materials 33
3.2 Fabrication methods of carbon materials 35
3.2.1 Synthesis of fullerene 35
3.2.2 Synthesis of carbon dots 35
3.2.3 Synthesis of carbon nanotubes 35
3.2.4 Synthesis of graphene 36
3.3 Fabrication of metal-based nanosensor materials 36
3.3.1 Synthesis of magnetic nanoparticles 37
3.3.2 Synthesis of metallophthalocyanines 37
3.4 Fabrication of polymer nanoparticles 37
3.4.1 Synthesis of polymer nanoparticles 37
3.5 Carbon-based materials and its place in electrochemical–pharmaceutical analysis 38
3.6 Metal nanoparticles and its place in electrochemical–pharmaceutical analysis 38
3.7 Polymer nanoparticles and its place in electrochemical–pharmaceutical analysis 51
3.8 Conclusion 53
References 54

4. Methods for characterization and evaluation of chemoresistive nanosensors 63

Anderson A. Felix, Pedro H. Suman and Marcelo O. Orlandi

4.1 Introduction 63
4.2 Figures of merit to evaluate semiconducting metal oxide sensors' performance 64

Copyrighted material

4.3 Chemoresistive gas sensors based on semiconducting metal oxides 64
4.3.1 Device configuration 64
4.3.2 Fundamental gas sensing mechanisms 65
4.3.3 Sensing layer characteristics 65
4.4 Characterization techniques applied to sensing layers' engineering 66
4.4.1 X-ray diffraction 67
4.4.2 X-ray photoelectron spectroscopy 67
4.4.3 Nitrogen adsorption/desorption isotherm analysis 68
4.4.4 Scanning electron microscopy 69
4.4.5 Transmission electron microscopy 69
4.4.6 Focused ion beam scanning electron microscopes 72
4.5 In situ and operando characterization methods 73
4.5.1 Kelvin Probe measurements 73
4.5.2 Diffuse reflectance infrared Fourier transformed spectroscopy 74
4.5.3 Operando UV/vis diffuse reflectance spectroscopy 76
4.5.4 X-ray absorption spectroscopy 76
4.5.5 Impedance spectroscopy 78
4.5.6 Hall effect measurements 78
4.6 Final considerations and future outlook 79
Acknowledgments 79
References 79

5. Tools and techniques for characterization and evaluation of nanosensors 85

Zamaswazi P. Tshabalala, Dina N. Oosthuizen, Hendrik C. Swart and David E. Motaung

5.1 Introduction 85
5.2 Generic techniques and tools for the characterization of sensing materials 86
5.2.1 Electron microscopy 86
5.3 Scanning probe microscope 88
5.4 X-ray diffraction 89
5.4.1 Energy-dispersive X-ray spectroscopy 90
5.4.2 X-ray photoelectron spectroscopy 90
5.5 Optical spectroscopy 91
5.5.1 Photoluminescence 92
5.6 Physisorption analysis 93
5.7 Thermal characterization techniques 94
5.8 Types of nanosensors and specialized techniques and tools for their characterization 95
5.8.1 Mechanical sensors 96
5.8.2 Thermal sensors 96
5.8.3 Optical sensors 96
5.8.4 Biosensors 96
5.8.5 Chemical sensors 97
5.9 Evaluation of nanosensors 98
5.9.1 Tools and techniques for the evaluation of nanosensors' performance 98
5.9.2 Specialized techniques and tools for the characterization of nanosensors 98
5.9.3 In operando techniques for gas nanosensors 98
5.9.4 Operando diffuse reflectance infrared Fourier-transform spectroscopy 100
5.9.5 Ultraviolet–visible spectroscopy 101
5.9.6 X-ray absorption spectroscopy 102
5.9.7 Operando Raman and surface-enhanced Raman spectroscopy studies 103
5.9.8 Mössbauer spectroscopy 103
5.9.9 Electron paramagnetic resonance spectroscopy 103
5.9.10 Electrical characterization 103
5.9.11 Hall effect measurements 104
5.9.12 Kelvin probe microscopy and work function measurements 104
5.9.13 Alternating current impedance spectroscopy 106
5.10 Conclusion 106
References 106

6. Nanoscale interface techniques for standardized integration 111

Dina N. Oosthuizen, Hendrik C. Swart and David E. Motaung

6.1 Introduction 111
6.2 Device interfaces and material integration 112
6.3 Integration techniques and system integration 112
6.4 Smart sensors standards 115
6.5 Conclusion 115
References 115

7. A novel triboelectric nanogenerator based on electrospun nanofibers and its application as a self-powered nanosensor 117

Cristobal Garcia and Irina Trendafilova

7.1 Introduction 117

Copyrighted material

7.1.1 Operation principle of triboelectric nanogenerators 118
7.1.2 Output performance enhancement of the nanogenerators 118
7.1.3 Applications as self-powered active sensors 119
7.2 Materials 120
7.2.1 Preparation of polymeric nanofibers 120
7.2.2 Characterization of triboelectric materials 121
7.3 Fabrication of the triboelectric nanogenerator 122
7.4 Experimental investigation through dynamic mechanical analysis 122
7.5 Results and discussion 123
7.5.1 Effect of the pressure on the triboelectric nanogenerator electric outputs 123
7.5.2 Effect of the frequency on the triboelectric nanogenerator electric outputs 126
7.6 Conclusion 126
Acknowledgments 127
References 127

8. Conducting polymer–based nanobiosensors 129

Neha Kanwar Rawat and Rinky Ghosh

8.1 Introduction 129
8.2 Introduction to biosensor 129
8.2.1 Constituents of biosensors 130
8.2.2 Classification of biosensors 130
8.3 Conducting polymers 132
8.3.1 Conducting polymers in biosensors applications 133
8.3.2 Conducting polymer–based nanosensors 139
8.4 Conclusion and future outlook 140
References 140

9. Magnetic nanosensors and their potential applications 143

Yassine Slimani and Essia Hannachi

9.1 Introduction to nanosensors based on magnetic nanoparticles 143
9.2 Preparation, characterization, and properties of magnetic nanoparticles 143
9.3 Magnetic nanosensors 144
9.3.1 Electrochemical sensing devices 144
9.3.2 Optical sensing devices 148
9.3.3 Piezoelectric sensing devices 150
9.3.4 Magnetic field sensing devices 150
9.4 Conclusion and future trends 152
References 153

10. Fabrication and functionalization of nanochannels for sensing applications 157

Waqas Khalid, Habib-ur-Rehman and Javeed Akhtar

10.1 Introduction 157
10.2 Fabrication of nanochannels 158
10.2.1 Organic substrates 158
10.2.2 Inorganic substrates 159
10.3 Inner-surface modification of nanochannels 160
10.4 Transport theories 160
10.5 Responsive nanochannels 160
10.5.1 pH-responsive nanochannels 161
10.5.2 Temperature-responsive nanochannels 162
10.5.3 Light-responsive nanochannels 162
10.5.4 Gas-responsive nanochannels 163
10.5.5 Electric potential–responsive nanochannel 164
10.5.6 Ion-responsive nanochannel 165
10.5.7 Molecule-responsive nanochannel 165
10.5.8 Dual responsive nanochannel 166
10.6 Conclusion and challenges 166
References 167

11. Carbon nanotube field effect transistors–based gas sensors 171

Maryam Ghodrati, Ali Mir and Ali Farmani

11.1 Introduction 171
11.2 Structural features of carbon nanotubes 172
11.3 Carbon nanotube field-effect transistors 172
11.4 Nanoscale sensor–based carbon nanotube field-effect transistors for toxic gases detection 173
11.4.1 Selective gas detection using a carbon nanotube sensor 174
11.4.2 Tunneling carbon nanotube transistor–based nano-sensors for toxic gases detection: a first-principle study 174
11.4.3 Nerve agent detection using networks of single-walled carbon nanotubes 176

Copyrighted material

11.4.4 Novel pyrenehexafluoroisopropanol derivative–decorated single-walled carbon nanotubes for detection of nerve agents by strong hydrogen-bonding interaction 178
11.4.5 Band engineering of carbon nanotube field-effect transistors via selected area chemical gating 178
11.4.6 Toward large arrays of multiplex functionalized carbon nanotube sensors for highly sensitive and selective molecular detection 178
11.4.7 Nanotube molecular wires as chemical sensors 178
11.4.8 Chemical functionalization of electrodes for detection of gaseous nerve agents with carbon nanotube field-effect transistors 178
11.4.9 Sensing mechanisms for carbon nanotube–based NH_3 gas detection 179
11.4.10 Understanding the electrical response and sensing mechanism of carbon nanotube–based gas sensors 179
11.4.11 Gas fingerprinting using carbon nanotubes transistor arrays 179
11.4.12 Selective gas detection using carbon nanotube field-effect transistor arrays fabricated using air-brush technique, with different metal as electrodes 180
11.4.13 Ultrathin films of single-walled carbon nanotubes: a potential methane gas sensor 180
11.5 Conclusion 180
References 181

Part II
Nanosensors for safe cities 185

12. Nanosensors for traffic condition monitoring 187

May El Barachi, Sawsan Abdul Rahman, Azzam Mourad and Wael Al Orabi

12.1 Introduction 187
12.2 Background and related work review 188
12.2.1 Intelligent transportation systems 189
12.2.2 Traffic estimation models 189
12.2.3 Related work 190
12.3 Vehicular sensing framework overview 191
12.3.1 Components' description 192
12.4 Matching and traffic-estimation modules 192
12.4.1 Matching model 192
12.4.2 Traffic-estimation model 194
12.5 Prototype and implementation 195
12.5.1 Prototype software architecture 195
12.5.2 Test-bed setup, datasets, and test scenarios 197
12.6 Experimental results and discussion 199
12.6.1 Performance-evaluation strategy and metrics 199
12.6.2 Algorithms' performance evaluation 200
12.7 Conclusion 207
References 207
Further reading 208

13. Nanosensors for street-lighting system 209

Ali Farmani and Ali Mir

13.1 Introduction 209
13.2 Street lighting structures 210
13.3 The properties of graphene 211
13.4 Surface conductivity of graphene 212
13.5 Calculated surface conductivity of graphene 217
13.6 Street-light controlling concept 218
13.7 Goos–Hänchen phenomena 219
13.8 Stationary phase approximation 219
13.9 Transfer matrix method 220
13.10 Street-light controller 222
References 224

14. Sensors for structural health monitoring 227

Oleg Sergiyenko, Moisés Rivas-López, Jesús E. Miranda-Vega, Wendy Flores-Fuentes, Julio C. Rodríguez-Quiñonez, Lars Lindner, Daniel Hernández-Balbuena, Félix F. Gonzalez-Navarro and Vera Tyrsa

14.1 Introduction 227
14.2 Smart cities and structural health monitoring 228
14.2.1 Smart and sustainable infrastructure 229
14.2.2 Structural health monitoring assisted by the Internet of Things 229

Copyrighted material

14.2.3 Smart systems for structural health monitoring 230
14.3 Systems and nanosensors in structural health monitoring 232
14.3.1 Chemical nanosensors 233
14.3.2 Biological nanosensors 234
14.3.3 Physical nanosensors 235
14.4 Optical scanning systems 237
14.4.1 Scanning aperture 237
14.4.2 Photosensor of the optical scanning system 239
14.4.3 Optical scanning system digital signal processing 240
14.5 Experimentation and results 242
14.6 Conclusion 247
References 247

Part III
Nanosensors for healthy cities 249

15. Nanosensors for monitoring indoor pollution in smart cities 251

Ritu Malik, Vijay K. Tomer, Nirav Joshi, Vandna Chaudhary and Liwei Lin

15.1 Introduction 251
15.2 Mesoporous In-(TiO_2/WO_3) nanohybrids as *n*-butanol gas sensor 254
15.3 Mesoporous WO_3–SnO_2 nanohybrids as volatile organic amine sensor 259
15.4 Conclusion and future outlook 263
Acknowledgments 263
References 263

16. Gas nanosensors 267

Anna Kornyushchenko, Vyacheslav Perekrestov and Gerhard Wilde

16.1 Introduction 267
16.2 Metal-oxide gas sensors 268
16.3 Carbon nanomaterial–based gas sensors 271
16.3.1 Graphene-based nanosensors 273
16.3.2 Carbon nanotubes 275
16.4 Conducting polymer sensors 277
16.5 Conclusions 279
Acknowledgment 279
References 279
Further reading 283

17. Nanosensors for water safety 285

Mohammad Ramezani, Seyed Mohammad Taghdisi, Rezvan Yazdian-Robati, Fatemeh Oroojalian, Khalil Abnous and Mona Alibolandi

17.1 Introduction 285
17.2 Applications of nanobiosensors in water safety 286
17.3 Nanosensors for the detection of heavy metals in water 286
17.3.1 Electrochemical nanosensors for the detection of heavy metals in water 286
17.3.2 Optical nanosensors for the detection of heavy metals in water 288
17.4 Nanobiosensors for the detection of infectious agents (virus, bacteria, etc.) in water 291
17.4.1 Electrochemical nanobiosensors for the detection of infectious agents in water 291
17.4.2 Optical nanobiosensors for the detection of infectious agents in water 292
17.5 Nanosensors for the detection of chemical contaminants (including toxins, antibiotics, and insecticides) in water 294
17.5.1 Electrochemical nanosensors for the detection of chemical contaminants in water 294
17.5.2 Optical nanosensors for the detection of chemical contaminants in water 295
17.6 Conclusion 298
References 298

18. Electrochemical virus detections with nanobiosensors 303

Sariye Irem Kaya, Leyla Karadurmus, Goksu Ozcelikay, Nurgul K. Bakirhan and Sibel A. Ozkan

Abbreviations 303
18.1 Introduction 304
18.1.1 Viruses 304
18.1.2 Effects of viruses 304
18.1.3 Methods used for the determination of viruses 304
18.1.4 Electrochemical studies and advantages 306

Copyrighted material

18.2 The most observed viruses in humans 307
18.3 Nanobiosensor 310
18.3.1 Substrates 312
18.4 Methods 312
18.5 Conclusion 318
References 318

19. Nanosensors for the detection of viruses 327

Sumaira Younis, Ayesha Taj, Rabisa Zia, Hunza Hayat, Ayesha Shaheen, Fazli Rabbi Awan, Haq Nawaz Bhatti, Waheed S. Khan and Sadia Z. Bajwa

19.1 Introduction 327
19.2 Magnetic nanoparticles for the detection of viral particles 329
19.3 Membrane-based sensor for virus detection 330
19.4 Electrochemical-based detection of virus 331
19.5 Fluorescence approach for virus detection 333
19.6 Microfluidic devices for virus detection 333
19.7 Point-of-care testing for detection of viral infections 335
References 337

20. Nanosensors for food safety 339

Palanisamy Kannan and Longhua Guo

20.1 Introduction 339
20.2 Nanomaterials and its functions 340
20.3 Roles of nanomaterials in food safety analysis 340
20.4 Foodborne-related diseases 341
20.5 Nanosensors for the detection of microbial contamination 341
20.6 Nanosensors for the detection of pesticides 344
20.7 Nanosensors for the detection of metal contaminants 346
20.8 Nanosensors for the detection of mycotoxins 347
20.9 Conclusions and perspectives 348
Acknowledgments 349
References 349

21. Application of nanosensors in the food industry 355

Gautam Patel, Vineeta Pillai, Purvi Bhatt and Shoaib Mohammad

21.1 Introduction 355
21.2 Nanosensors for food safety 357
21.2.1 Detection of chemicals and contaminants 358
21.2.2 Detection of food spoilage and moisture 362
21.2.3 Detection of sweeteners 362
21.2.4 Detection of genetically modified food 363
21.3 Smart food packaging sensors 363
21.4 Nanosensors for product acceptability 364
21.5 Conclusion 365
References 365

22 Application of nanosensors for food safety 369

Mohammad Ramezani, Masoomeh Esmaelpourfarkhani, Seyed Mohammad Taghdisi, Khalil Abnous and Mona Alibolandi

22.1 Introduction 369
22.2 Applications of nanobiosensors for food safety 369
22.2.1 Nanobiosensors for the detection of toxins in foods 370
22.2.2 Nanobiosensors for the detection of infectious agents (virus, bacteria, etc.) in foods 376
22.2.3 Nanobiosensors for the detection of chemical contaminants in foods 379
22.3 Conclusion 383
References 383

23 Nanosensor networks for smart health care 387

Tooba Khan, Meltem Civas, Oktay Cetinkaya, Naveed A. Abbasi and Ozgur B. Akan

23.1 Introduction 387
23.2 Nanosensor networks architectures 388
23.2.1 Nanoscale wireless communications 388
23.2.2 Bioinspired molecular communications 389

Copyrighted material

23.3 Smart health-care applications of nanosensor networks 393
23.3.1 Bioimplantable medical devices 393
23.3.2 Body area networks 394
23.3.3 Internet of Nano Things 395
23.3.4 Smart drug delivery 395
23.4 Research and implementation challenges 396
23.4.1 Development of nanomachines 396
23.4.2 Protocol stack issues 396
23.4.3 Power provisioning techniques 397
23.5 Conclusion 399
Acknowledgment 399
References 399

24. Nanosensor networks for health-care applications 405

Jiancheng Yang, Patrick Carey IV, Fan Ren, Brian C. Lobo, Michael Gebhard, Marino E. Leon, Jenshan Lin and S.J. Pearton

24.1 Introduction 405
24.2 Severe acute respiratory syndrome virus 406
24.3 Zika virus 406
24.4 Botulinum toxin 406
24.5 Hg and Pb in water 408
24.6 Cancer 409
24.6.1 Breast cancer 409
24.6.2 Prostate cancer detection 409
24.7 Cerebrospinal fluid detection 410
24.8 Troponin 410
24.9 Wireless sensor networks 411
24.10 Summary and conclusions 413
Acknowledgments 414
References 415
Further reading 417

25. Optical nanosensors for cancer and virus detections 419

Ali Farmani, Mohammad Soroosh, Mohammad Hazhir Mozaffari and Tina Daghooghi

25.1 Introduction 419
25.2 Optical nanosensors for early cancer detection 420
25.2.1 Proposed structure of optical nanosensors 420
25.2.2 Application for cancer detection 421
25.2.3 Concluding remarks 422
25.3 Label-free optical nanobiosensors for virus detection 423
25.3.1 Background of label-free biosensors 423
25.3.2 Optofluidic biolaser 425
25.3.3 Photonic crystal–based optofluidic biolaser 425
25.4 Graphene optical sensor based on the surface plasmon resonance 430
References 430

26. Nanosensors for health care 433

Priyanka Singh and R.D.S. Yadava

26.1 Introduction 433
26.1.1 Health care needs 433
26.1.2 Traditional methods on lab-on-a-chip 434
26.1.3 Nanosensors on lab-on-a-chip 434
26.2 Nanosensors for disease diagnostics 435
26.2.1 Nanoparticle sensors 435
26.2.2 Electrochemical sensors 436
26.2.3 Nanomechanical sensors 436
26.3 Micro- and nanocantilever sensors 437
26.3.1 From microelectromechanical structure to nanoelectromechanical system 437
26.3.2 Sensing principles 437
26.3.3 Problems with sensing in liquid phase 439
26.3.4 Cases of bioanalyte sensing in liquid phase 439
26.4 Health monitoring by breath analysis 440
26.4.1 Disease biomarkers in breath 440
26.4.2 Issues 441
26.4.3 Breath sampling 441
26.4.4 Traditional methods 441
26.4.5 Electronic noses 442
26.5 Vision for future 443
References 445

27. Concept of intelligent nanosensors used in smart cities 451

Mainor Cruz Alvarado and Patricia Bazán

27.1 Introduction 451
27.2 Nanotechnology: past, present, and future 451
27.3 Nanosensors 452
27.4 Nanocommunications 452
27.4.1 Molecular communication 453

Copyrighted material

27.4.2 Nanoelectromagnetic communication 453
27.5 Types of nanosensors 453
27.6 Nanomaterials 454
27.7 Application of nanosensors in different fields 454
27.8 Nanosensors for smart cities 455
27.8.1 Recent innovation in nanosensors 456
27.8.2 Trend analysis for nanosensors 456
27.8.3 Type of nanomaterials used for construction of nanosensors 460
27.9 Conclusions 460
Acknowledgments 462
References 462

28. Nanosensors for exhaled breath monitoring as a possible tool for noninvasive diabetes detection 467

Artur Rydosz

28.1 Diabetes 467
28.1.1 Key facts about diabetes 467
28.1.2 Why diabetes is so dangerous? 468
28.1.3 Measurements and diagnostics 468
28.2 Diabetes biomarkers in exhaled human breath 469
28.3 Metal oxide-based nanosensors for exhaled acetone detection 471
28.3.1 SnO_2-based sensors 472
28.3.2 ZnO-based gas sensors 473
28.3.3 WO_3-based 473
28.3.4 Graphene oxide-based 474
28.3.5 In_2O_3-based 475
28.3.6 Other materials 475
28.4 Conclusion 478
Acknowledgment 478
References 478

29. Chemo/bionanosensors for medical applications 483

Yongxin Li, Hao Wang and Haoran Tang

29.1 Introduction 483
29.2 Optical nanosensors 483
29.3 Electrochemical nanosensors 489
29.4 Magnetic nanosensors 494
29.5 Other nanosensors 494
29.6 Conclusion and discussions 496

30. Virus detection using nanosensors 501

Yeşeren Saylan and Adil Denizli

30.1 Introduction 501
30.2 Fundamental of nanosensors 503
30.3 Significance of virus detection 503
30.4 Applications of nanosensors in virus detection 504
30.4.1 Human immunodeficiency virus 504
30.4.2 Hepatitis B virus 504
30.4.3 Human papillomavirus 504
30.4.4 Ebola 505
30.4.5 Zika 505
30.4.6 Influenza 506
30.4.7 Other viruses 507
30.5 Conclusion and outlook 507
References 508

Part IV
Sensor networks for smart cities 513

31. Using nanosensors in wireless sensor networks 515

Diego V. Queiroz, Ruan D. Gomes, Iguatemi E. Fonseca, Cesar Benavente-Peces and Marcelo S. Alencar

31.1 Introduction 515
31.2 Nanocommunications 517
31.3 Nanoscale antennas 519
31.3.1 Modulation and encoding 520
31.3.2 Channel problems 521
31.4 Energy harvesting and energy-aware protocols 521
31.5 Simulation tools 523
31.5.1 Channel models 523
31.6 Conclusion 524
References 524

32. Crowdsensing architectures for smart cities 527

Claudio Fiandrino, Andrea Capponi, Dzmitry Kliazovich and Pascal Bouvry

32.1 Introduction 527
32.2 Modeling energy consumption in crowdsensing architectures 528

Copyrighted material

32.3 Crowdsensing architectures for data collection 529
32.3.1 Related works 530
32.3.2 The considered data-collection frameworks 530
32.4 Performance evaluation 531
32.4.1 The application and experimental setup 531
32.4.2 Experimental results 532
32.4.3 Simulation setting 532
32.4.4 Simulation results 535
32.5 Case study: smart lighting 536
32.5.1 The problem of smart lighting in modern smart cities 536
32.5.2 Evaluating smart lighting solutions with CrowdSenSim 539
32.6 Conclusion and open challenges 540
References 541

33 Participatory sensing framework 543
Károly Farkas
33.1 Introduction 543
33.2 Related work 544
33.3 Framework for participatory sensing–based applications 546
33.3.1 Communication model 546
33.3.2 Components 546
33.3.3 Analytics 547
33.4 Smart city application use cases 549
33.4.1 Live transit-feed service 549
33.4.2 Smart campus 551
33.5 Summary 552
Acknowledgments 552
